# Package Contents

When you've unpackaged the machine, check below to ensure you have everything listed before getting started.

- A** ArcadeMAX Hyperion Machine Main Unit
- B** ArcadeMAX Hyperion Machine Seat Unit
- C** Wireless Keyboard + Dongle
- D** Power Cable
- E** Access Keys
- F** Instruction Booklet
- G** SSD Card Reader + USB Cable
- H** LED Lighting Remote Control
- I** Allen Keys
- J** Mounting Brackets (x 2)
- K** Mounting Bolts (x 8)

# Assembling Your Machine

Before using your machine, it needs some basic assembly. Your machine will come in two separate boxes. One for the main unit and one for the seat unit.

Begin by locating loose connecting wires inside each of the 2 units. Each unit will have 2 loose wires with plugs. Look inside the hole where each unit will join to locate them.

Connect the loose wires between the 2 units together. The black plug connects to the black connector. The white plug connects to the white connector.

Align the main unit and seat unit and push them together.

**Caution:** Ensure the wires and connectors between the two units are not pinched as they are brought together. Feed the wires and connectors back into the holes to prevent this.

Using the included Allen key, mounting bolts and mounting brackets, bolt the two units firmly together on each side of the machine. Each bracket can be held with 8 bolts.

# Get to Know Your Machine

Your machine has several external controls and components to get familiar with.

## Front

## Back

## Getting Inside

If you need to access the interior components (for accessing settings or troubleshooting), there are 2 ways of getting access:

### Front Access Door

Use the access keys to open the front access door (highlighted). Opening the front access door gives easy access to:

- Amplifier Controls

## Rear Access Panel

Use the access keys to open the rear access panel (highlighted).  
Opening the rear access door gives access to:

- Screen Connections
- Main Board

## Wheels and Feet

Your ArcadeMAX system is on castor wheels that allow for easy moving of the machine and retractable feet that can keep the machine in place.

The retractable feet are on screw threads that can be turned either by hand or with a 22mm spanner. Use the spanner to turn the feet to the desired position.

## Powering Up and Powering Down

The machine requires a single wall power socket to operate.

Plug the power cable into the wall power socket, then into the power plug on the rear of the machine.

## Switch On

Enable power to the machine by flipping both Master Power Switches to on. One switch is next to the power plug. The second is on the top of the machine. **Both switches should glow when switched on.**

## Turning On the Internal PC

Power the internal PC up by pressing the PC Power Button on the front of the machine.

Power the internal PC down by pressing the Power Button once you have finished using the machine.

**WARNING - The internal PC MUST be powered down before flipping either master power switch. Failure to do so could result in corrupted system settings.**

## Automatic Steering Wheel Calibration

Upon each boot up, the machine will run an auto-calibration on the force-feedback steering wheel. This will cause it to turn by itself. The steering wheel will return to the default position once calibration is complete.

**Do not touch the steering wheel throughout this auto-calibration process.**

## Adjusting the Seat

The seat unit on the Hyperion is fully adjustable. Use the following adjustment points to set the seat into your desired playing position.

Sit in the seat and utilise the following adjustments:

**Slider Lever:** Pull up on the slider lever to release the seat to move forward or back. Release the lever to lock the seat into position.

**Backrest Tilt Lever:** Pull up on the backrest tilt lever to release the backrest to tilt forwards or backwards. Release the lever to lock the seat into position.

## Controlling the Lights:

This ArcadeMAX machine includes lighting underneath the cabinet that can be turned on or off depending on your preference. Flip the lighting switch on the back of the machine to switch the lighting either on or off.

The lighting can be switched and left on regardless of whether the machine's internal PC is switched on or not allowing for games room ambience when the machine is not in use.

The lighting on this machine has numerous modes and settings that can be adjusted. This includes the lighting pattern, brightness and colour. All can be changed (or switched off) with the included remote control.

**This page is intentionally left blank.**

## Volume Control

You have two options when it comes to control over the machine's internal amplifier.

You can raise and lower the volume of the internal PC using the volume buttons on the Force-Feedback steering wheel. Pressing the **+ button** will raise the volume, pressing the **- button** will lower it.

Additionally, you have access to the internal amplifier directly via the smaller front door beneath the gear shifter on the main unit of the machine. Use the access keys to open it.

The sound can be switched on or off with the button on the left. The main volume dial will be illuminated when switched on.

You have 3 dials to adjust the bass, treble and overall volume.

## **SSD Card Reader**

Your machine also comes with a small reader for SSD cards. Whilst this is not used in typical operation of your machine, it should be retained for troubleshooting purposes when in contact with technical support.

**This page is intentionally left blank.**

# Controls:

## Force-Feedback Steering Wheel

The Force-Feedback steering wheel has all the controls you need to operate the system.

**Please Note: Force Feedback functionality is game-dependent. Please refer to the games list for a complete list of compatible games.**

# Pedals

# Gear Shifter

**Please Note: Gear Shifter functionality is game-dependent. Please refer to the games list for a complete list of compatible games.**

# Initial Set Up

When powered on, your ArcadeMAX system will perform a series of initialisation routines (including the steering wheel calibration covered on page 15). When all these are complete, the main games menu will be displayed.

**You will need to set up the machine's internet connection and wireless keyboard before being able to proceed further.**

## Connecting the Included Keyboard

Whilst not necessary for most games, your ArcadeMAX machine includes a wireless keyboard with built-in trackpad. This is needed in order to access certain machine settings.

The keyboard is easy to set up, requiring one AA battery (not included) and the included Keyboard dongle.

1. To set up, Remove the battery cover on the back of the keyboard and insert 1 AA battery. The Keyboard Dongle can be found within the battery compartment and can be stored here when not in use.

Front USB Port

PC Power Button

2. Plug the keyboard dongle into the front of the machine using the front USB port (next to the PC Power Button) and switch on the keyboard using the on/off switch. It will automatically connect to the machine. You can verify a connection has been made by using the trackpad to move a mouse cursor around the screen.
3. The bottom of the touch pad features buttons that allow you to click on or otherwise interact with the system.
4. You can switch the keyboard off when not in use to preserve battery life.

**This page is intentionally left blank.**

# Connecting to the Internet

To use the machine and download games to play, you must connect your machine to the internet. Your ArcadeMAX machine can get online in one of two ways:

- Wired ethernet connection (More stable and reliable)
- Over Wi-Fi (More convenient)

## Connecting via Ethernet Cable

To connect the machine to the internet via a wired connection, plug a network-connected ethernet cable into the back of the machine into the Network Connector Port until it clicks. You'll be online and ready to start downloading games.

### CAUTION

Be aware of moving the machine when connected using a wired internet connection so as not to strain the cable. Tugging at the cable can damage the cable, the plug or the machine's network connector.

## Connecting Via Wi-Fi

To connect the machine to a Wi-Fi network, you will need to use the machine's included wireless keyboard (see above for details on use and how to connect)

Access the machine's Wi-Fi settings by hitting **ESC** on the keyboard to leave the main games menu and then click the Wi-Fi settings icon in the bottom right of the screen. Look for the following icon:

You can use this to find your own home Wi-Fi network and input any required credentials.

Return to the games menu by double clicking the **WPlayer.exe icon** on the desktop.

Once complete, your machine will be online and ready to start downloading games.

You can check your internet connectivity strength by referring to the Wi-Fi indicator in the top right of the machine's main games menu.

# Using The Main Menu

When switched on, your machine will automatically load the main games menu.

The main menu on the ArcadeMAX system is your home base for playing games on your system. Use it to look through the games list, search for games or even assign favourites.

**This page is intentionally left blank.**

## Basic Menu Controls (Steering Wheel)

D-Pad

---

**Up: Move up 1 selection**

---

**Down: Move down 1 selection**

---

**Left: Move back one page**

---

**Right: Move forward one page**

X Button

**Play current selection**

□ Button

**Add current selection to favourites**

Start Button

**Search Tab (Shortcut)**

Gear Shift Paddles

**Left Paddle: Move back one page**

---

**Right Paddle: Move forward one page**

---

Centre Buttons

**Top: Not Used**

---

**Middle: Settings Menu**

---

**Bottom: Not Used**

## Selecting A Game To Play

Use the **D-Pad** to navigate through the lists, then select your game with the **X Button**. The game will download to your system and then launch.

The Main Games Menu is also split into different tabs for ease of navigation.

Highlight a tab with the **D-Pad**, then move left or right to scroll through the tabs.

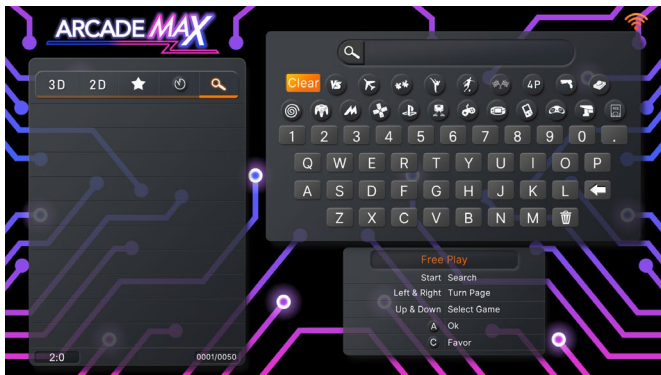

## Adding A Favourite

Any game in the games list can be added to your own favourites list. Press the **□ Button** on any highlighted game to add it to your favourites list.

Favourited games will display a star next to their name.

You can view a collection of all games you have added to your favourites in the “Favourites” tab in the main menu.

## Search Functionality

The system includes a very useful search function that can help you find or narrow down your selection in seconds, without having to scroll through the entire games list. You can shortcut to this menu by pressing the **Start Button** Or by navigating to the search tab (on the far right) at the top of the games list.

## Using the Search Functionality

In this menu, you can use the **D-Pad** and **X Button** to type what you want to search for with the on-screen keyboard. There is no need to input spaces. You can delete letters using the backspace key on the on-screen keyboard.

You also have the option of toggling the genre using the genre toggles (press the **X Button** whilst on a highlighted option to toggle it on or off)

As you enter in letters, the list on the left will begin to fill with games that match your search term. Jump to the search results with the **Button**, then use the **D-Pad** and **X Button** to select and play any of the search results.

You can add a highlighted game to your favourites by pressing the **Button**.

When you exit the game, you will return to your original search results, where you can play another result, search for another game or navigate back to the main games list

This page is intentionally left blank.

# In-Game Controls

**Clutch Pedal: Clutch  
(game dependent)**

---

**Brake Pedal: Brake**

---

**Gas Pedal:  
Gas/Accelerate**

Gear Shifter

**Shift gears (game  
dependent)**

Gear Paddles

**Left Paddle: Shift Down  
a Gear (game  
dependent)**

---

**Right Paddle: Shift Up a  
Gear (game dependent)**

Start Button

**Insert virtual coin and  
start a 1-player game**

Centre Buttons

**Top: Not Used**

**Middle: Not Used**

**Bottom: Pause  
Menu/Exit (game  
dependent)**

D-Pad  
(In Pause Menu)

**Up: Move up selection**

**Down: Move down  
selection**

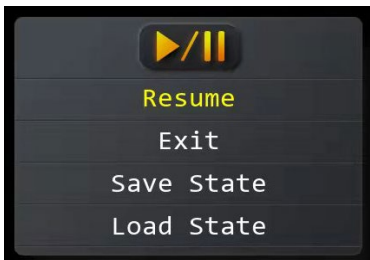

X Button  
(Pause Menu)

**Confirm selection**

When a game is loaded, a 1-player game can be started with the [Start Button](#). Pressing this also acts as inserting a virtual coin, should the game you're playing require them.

## Pause Menu

A game can be paused or quit at any time by pressing the **Pause Button**, where you will be given the option to resume your current game, exit back to the main menu or save or load a game.

**Note:** Pausing is game dependent and may not be supported. Games not supporting pausing will simply exit to the main menu.

**Note:** It is important to note that any game file downloaded to the system for play is not permanently saved to the system's internal storage. All games by default are deleted immediately upon exiting and will need to be downloaded again.

Please refer to the Game Delete option instructions in the system settings section of this manual (see page 50) if you wish to save and store games indefinitely to the system's internal storage.

## Saving and Loading a Game

**Note:** Only certain games will keep track of high scores. In most cases, every time a game is loaded, it is loaded 'from fresh' meaning that high scores are not saved between games unless saved manually by the player using the saving and loading system.

The saving and loading system may not be supported by every game.

The saving and loading system allows you to save your progress at any point on certain games, and then return to that point at a later time. This is achieved by saving a "State".

### About "States"

On this ArcadeMAX system, a "State" can be described as a specific point or moment when in the game. When you load a state, you will return in the game to the exact moment where you saved it.

States can be saved or loaded at any point of the game.

On this system, there can only be one state per game. Each new state you save will overwrite the last.

Save states are unaffected by games being deleted from the system and will be maintained if the game is downloaded again.

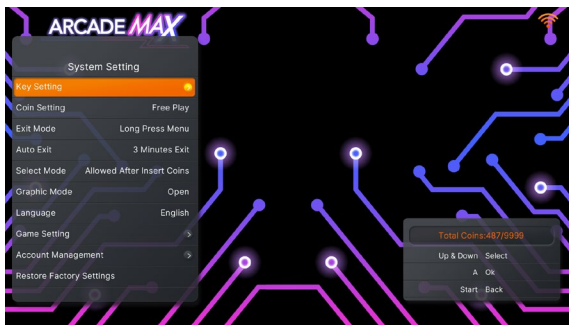

## How to use

To access the save and load system, pause the game you're currently playing using the **Pause button**, then save the state by scrolling to the "Save State" option and pressing the **X Button**.

To load the last state you saved, pause the game using the **Pause button**, then select the "Load State" option from the menu using the **X Button**.

This page is intentionally left blank.

# System Settings

System settings are changed at a user's own risk. It is recommended to perform the **"Restore Factory Settings"** function (see page 44) on the machine if performance becomes erratic.

This machine has a range of different options that can be changed or modified to change the machine's function to the user's preference.

Press the **Settings Button** on the steering wheel to access the settings menu.

## Basic Menu Controls

Move

Face Buttons

△: D Button (Not Used)

□: C Button

○: B Button

X: A Button (Confirm Selection)

Start Button

Go Back / Exit

# Outline of Settings Menu Options

## Key Setting

- **Keys Testing**

Use this mode to have a visual representation of how the machine responds to inputs. The relevant button will light up on the screen when it is pressed.

- **Key Definition**

Use this mode to remap any of the player buttons to different inputs. You can switch between the machine's default button mapping or your own mapping choices.

## Coin Setting

- This setting should always be set to Free Play

## Exit Mode

These options allow you to specify a shortcut to quitting the games without having to use the pause menu.

- Start + Coin
  - Press the Start Button and the Coin button simultaneously to quit the game. **This option is not possible on this machine.**
- Long Press Menu
  - Press and hold the Start Button to quit the game.

## Auto Exit

Use these options to specify shortcuts or a timeout to exit a game.

- **3 Minutes Exit**
  - Will exit the game automatically after 3 minutes of inactivity.
- **Closed**
  - No shortcuts or automatic timeout will be implemented.

## Select Mode

- This setting should always be set to **“Always Allowed”**

## Graphic Mode

Use this mode to change the graphics fidelity of certain games.

- **Open**
  - Improved graphics performance.
  - May impact the overall performance of more technically intensive games
- **Closed**
  - Basic graphics performance
  - Most stable mode for running games.

## Language

Toggle through the machine’s language settings

## Game Setting

Multiple options for changing numerous menu and game settings (see page 47 for more details)

## Account Management

Change settings pertaining to various admin-related options and metrics.

- **Clear Coins**
  - Cancel out any virtual coins that have been applied to the system
- **Change Password**
  - Change the system's default Admin password.
  - The default admin password for the machine is 11111111
- **Reset Password**
  - Input the current password to reset the machine's password to the default: 11111111

## Restore Factory Settings

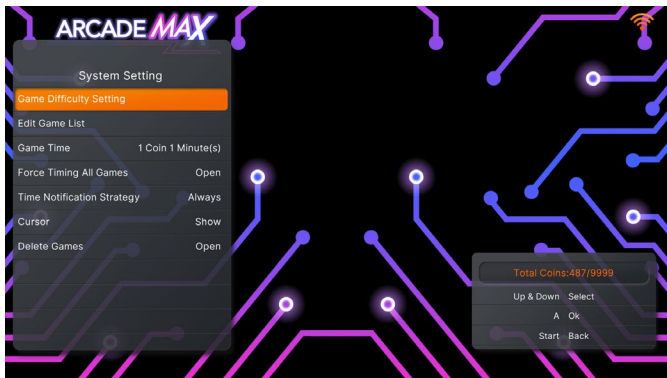

If you want to return every system setting to its default, select this option, then confirm your decision in the popup that appears.

Please note that any account management settings (such as passwords) will not be affected by this reset.

## **Background Download**

This option is not available on this machine.

## Outline of Game Setting Options

The Game Setting option in the settings menu can be used to modify a wide range of settings, as listed below. You can return to the main settings list at any time using the [Start button](#).

### Game Difficulty Setting

Use this setting to modify the difficulty of supported games in the games list.

- Navigate the list using the [D-Pad](#) to highlight the game you want to modify.
- Press the [X Button](#) to increase the difficulty. (will reset to 0 beyond the maximum possible number)
- Press the [O Button](#) to increase the number of lives (will reset to 0 beyond the maximum possible number)

- Press the **□ Button** to apply the current settings to all games in the games list.
- Press the **Start Button** to exit and save these settings.

## Edit Game List

Use these settings to hide certain games from the main games list from view.

- Navigate the list using the **D-Pad** to highlight the game you want to modify.
- Press the **X button** to hide the currently highlighted game.
- Press the **O button** to hide every game in the list.
- Press the **□ button** to show every game in the list.
- Press the **Start Button** to exit and save these settings.

## Game Time

This setting is only used with specific coin settings. Please ignore this option.

## Force Timing All Games

This option will force all games to operate on a timer, closing them once time is elapsed. For Free-Play purposes, ensure the “Closed” option is selected.

## Time Notification Strategy

This option pertains to the Force Timing option above.

- **Always**
  - The remaining time is always displayed on-screen
  
- **Default**
  - The remaining time is only shown when the Start Button is pressed.

## Cursor

This option will either hide or display a cursor on screen.

- **Show:** Cursor will be displayed.
- **Hide:** Cursor will be hidden.

## Delete Games

This option will control how the system deals with downloaded games once they are closed.

- **Open**
  - Games will be deleted immediately upon closing.
- **Closed**
  - Games will be saved indefinitely to the machine's internal storage. You must accept the conditions of the popup before this feature can be enabled.

**WARNING - Disabling the machine's game deletion functionality can cause legal issues pertaining to copyright. Users choosing to utilise this functionality are accepting full legal responsibility for doing so.**

# Troubleshooting

| Issue                    | Possible Cause/Solution   |
|--------------------------|---|
| No Sound                 | Check the machine's amplifier is turned on and is turned up.  |
| No Image Signal          | <p>The cable connecting the main board to the monitor may have become disconnected or faulty.</p> <p>Verify the main board and the monitor are connected together and if so, replace the HDMI cable running from the main board to the monitor.</p> |
| Unable to download games | <p>The games cloud may temporarily be down, or the machine may be having internet connectivity issues.</p> <p>Check the machine's internet connectivity (with the Network indicator on the main menu) and update Wi-Fi settings if necessary.</p>   |
| Buttons not working      | First, verify if a button is working or not in the game's settings via the Keys Test (see page 42). Contact our team and we can help you further.   |

**If you have any other issues, or any of the above does not solve your issue, contact us (Contact details on the back of this booklet)**
